Features

- Monitor Mounting Adapter
- Compatible with: Accsoon CineView, CineEye
- Material: Aluminium Alloy
- Dimensions: 70.8 x 38.4 x 20mm
- Weight: 100g

The ACC03 is designed to allow a CineView or CineEye RX unit to mount to various monitors, cages and cameras in a different ways. It is especially suited for use where the user is building a director's monitor setup with both monitor and RX unit powered from a separate battery. It is also suitable for use with several popular monitors with dual NP battery slots where the second battery can be used to power the monitor. In both cases power is supplied to the RX via DC barrel connector from an external battery.

Another option is to turn an unused battery slot in a monitor, camera, RX or TX unit NP battery slot into a useful series of 1/4" 20 and 3/8" holes for mounting of other accessories. Suitable for use with several popular monitors with dual NP battery slots where the second battery can be used to power the monitor.

*Please note that the ACC03 is a purely mechanical adapter with no power pass thru capability. Users will need to power their CineView or CineEye units via the DC barrel connection when using the ACC03.
