Cokin X-Pro (XL) Nuances Extreme Grad ND8

ProdCode: COKIN10976

Glass Grad ND8 (3 stop) filter with soft transition for Cokin XL Size (X-Pro Series) filter holders

[Download Images] (.zip file)

Features

- 3-Stop Graduated Neutral Density Filter
- Up to 8x Filter Factor (0.9)
- Hardened Tempered Schott Glass
- Soft Transition for Reduced Exposure in selected areas
- Nano-Metallic Alloy coating for stunning colour neutrality and consistency across the range
- Filter dimensions: 130 x 170 x 2.3mm

The Nuances Extreme Soft Grad ND8 allows up to 3 stops of light compensation with a soft transition from the top of the filter to the centre. Nuances Extreme filters are made from a new type of tempered optical glass that is 4 times stronger than the previous series. This means your new filters can travel with you into extreme conditions and withstand those inevitable drops and scratches that can happen to any photographer.

A new Nano-Metallic Alloy coating process ensures uniform density. This process results in stunning neutrality and absolute colour consistency throughout all types and densities in the series. So switching from one density or style to another will still yield the exact same colour results, with no adjustments necessary. These filters have an industry standard 2mm thick glass and rounded corners to make them easy to insert into a filter holder. If a light-tight seal is needed, Cokin recommends using the back slot of the EVO series filter holders.

In the box:

- Nuances Extreme Glass Filter
- Filter Pouch
