- V-AF 24mm T1.9 FE
- V-AF 35mm T1.9 FE
- V-AF 45mm T1.9 FE
- V-AF 75mm T1.9 FE
- V-AF 100mm T2.3 FE
- V-AF Anamorphic MF Adapter 1.7x

- V-AF MF Adapter
- Lens Station
- V-AF 6 Lens Case

Unified Form Factor – Compact & Light

The V-AF increases compatibility with gimbals and drones by applying the unified form factors with its 5 different focal lengths (Ultra-Wide to Medium-tele). By providing a compact size of 73 X 70mm and a light-weight of less than 300g, there is no need to re-set the equipment when changing the lenses.

Tally Lamp - Excellent usability

The lamp located on the front and mount index helps the user to check whether a video is recorded or not while shooting. It supports video content creation more conveniently even in a small space without a lot of equipment.

Support 8K and the same colour tone

The new V-AF series supports resolutions up to 8K in a small and lightweight form, which is well suited for use with handheld gimbals and drones, as well as for studios and location productions. All lenses within the new V-AF series are color-matched to avoid shifts when swapping lenses, and the 9 aperture blades allow for a natural-looking bokeh.

Custom Switch & Button

Features the 'Focus save' function usually in professional cine equipment and custom mode that adds function by firmware, which provides video-specific functions for students and amateur users who dream of cinematographers.

1.7x Anamorphic MF Adapter

The exclusive 1.7x Anamorphic Adapter provides full frame compatibility with V-AF 35/45/75 & 100mm lenses and is suitable for APS-C/Super 35 modes with the V-AF 24mm.

MF Adapter

Allows precise 300° (Max.) mechanical focus control. It is compatible with 95mm matte boxes and and can be used with Follow Focus systems

Hard Case

The dedicated Hard Case houses the 6 V-AF lenses, V-AF Anamorphic Adapter, V-AF MF Adapter & Lens Station. The case also holds selected Alpha camera bodies *(Camera not included)*
