Atomos USB-C to Serial Calibration & Control

ProdCode: AOATOMCAB018

Atomos USB-C to Serial Calibration & Control Cable

[Download Images] (.zip file)

Features

The Atomos USB Type-C to Serial LANC Calibration Cable is 13? long end-to-end and allows you to connect virtually any Atomos monitor or monitor/recorder to a computer for use with select calibration systems.

When using the Atomos calibration software, which is provided as a free download for Windows and Mac on the Atomos website, this cable can be used with the X-Rite i1 Display Pro calibration hardware. But you can also use optional third-party calibration software, in which case the cable can be used with any calibration hardware compatible with that software, such as Datacolor Spyder systems in many cases. The cable features a USB Type-C computer interface and has a 2.5mm LANC connector on the other end. Almost every Atomos monitor has a matching 2.5mm LANC port.

- Atomos USB-C to Serial Calibration & Control Cable
- Compatible with Most Atomos Monitors
- Use with Atomos or Third-Party Software
