- Full NDI both ways
- Compatible with BirdDog Comms, the world's best NDI Intercom System
- Compatible with BirdDog Central, the world's best NDI delivery platform
- Aircraft grade aluminum case
- Firmware upgradeable

The World's Smallest NDI® Encoder and Decoder

Designed from the ground up around BirdDog's custom NDI® silicon chip, Mini is the ultimate NDI® Encoder and Decoder.

Attach Mini to any camera via a HDMI connection and you can introduce that camera source into your NDI workflow. Mini also features a complete Tally system to eliminate the need for multiple boxes on your camera. Mini can also be used as an NDI® Decoder making it perfect for Digital Signage and IMAG applications. Simply attach Mini to your HDMI television or HDMI monitor and send NDI® sources to the Mini to play out onto the screen.

Due the super intelligent design of the BirdDog custom NDI® silicon chip the latency on Mini is insanely low; Just 16ms on encode and 16ms on decode.

Mini is compatible with BirdDog Comms. Comms is a complete Audio Intercom solution that can run on any Windows 10 compatible computer, laptop, or surface for a touch screen experience.
