Compact, Powerful Colour Panel

[\[Download Images\]](#) (.zip file)

Features

- Compact yet powerful colour panel that gives you all the control you need to create cinematic images
- Features a row of direct control knobs at the top of the panel, three trackballs with rings for colour grading and transport keys to speed up your grading session
- Includes controls for refined colour grading including adding windows and a tablet slot designed to hold an Apple iPad
- Connects via Bluetooth or USB-C

DaVinci Resolve Color Panels

DaVinci Resolve color panels let you adjust multiple parameters at once so you can create unique looks that are impossible with a mouse and keyboard. The incredibly small DaVinci Resolve Micro Color Panel is great for new colourists just getting started or anyone that needs a portable panel. It features 3 high quality trackballs, knobs for primary grading controls and buttons for accessing additional tools. The DaVinci Resolve Mini Panel features additional controls and screens for accessing virtually all palettes and tools. For the ultimate control, the DaVinci Resolve Advanced Panel gives high end professional colourists access to every single feature and command mapped to a specific button.

Three Panels to Choose From

With three panels to choose from, it's easy to find one that perfectly fits your job and project scope. If you're just getting started, the DaVinci Resolve Micro Color Panel is incredibly compact while featuring dozens of professional colour controls. It fits perfectly next to a keyboard and is great for on set grading with a laptop. The DaVinci Resolve Mini Panel is ideal for freelance artists that need a fully featured portable panel that can be set up at home or moved between jobs. The DaVinci Resolve Advanced Panel is designed for professional colour suites on feature film, television and commercial projects. All 3 panels have similar layouts, making it easy to move up when you're ready.

DaVinci Resolve Micro Color Panel

Powerful color panel gives you all the control you need to create cinematic images. Includes controls for refined colour grading including adding windows. Connects via Bluetooth or USB-C.

Professional Trackballs

The trackballs let you adjust the colours in an image based on lift, gamma and gain tonal ranges. Unlike a mouse and keyboard, you can manipulate multiple trackballs simultaneously to create unique effects. The smooth gliding rings around the trackballs let you set master levels and establish dynamic contrast. Keys above each trackball reset the colour adjustment, level adjustment or both. Three keys at the top of the DaVinci Resolve Mini and Micro Color Panels let you switch between primary and log wheel modes, activate offset, temperature and tint controls and turn on your full screen viewer output. The DaVinci Resolve Advanced Panel has a fourth master

gain trackball to adjust the entire image.

Primary Adjustment Controls

Primary adjustment controls affect the luminance and chrominance of your entire image using a variety of tools that target specific tonal and hue ranges. These tools represent the most common adjustments required to produce dynamic imagery, making them a popular choice for photographers, graphic designers and colourists working on a tight deadline. The DaVinci Resolve Micro Color Panel and Mini Panel include 12 primary colour correction control knobs that make it easy to quickly adjust image contrast, saturation, hue, temperature, tint, midtone detail, colour boost, shadows, highlights and more. All knobs can be pressed to instantly reset the control so you can easily experiment with new looks.

Flexible Power Options

The DaVinci Resolve Micro Color Panel is fully powered via USB so you can simply plug it into a laptop to get up and running at home, in a studio or on set. That makes it ideal for grading with a portable system on a cart while shooting. The DaVinci Resolve Mini Panel includes a built in power supply so there's no bulky external power brick. It also features ethernet and supports PoE (power over Ethernet). That means you can operate it via your network and power it from over the network connection so you don't need to plug in the power cable. The DaVinci Resolve Advanced Panel features an auto switching international power supply, making it compatible with mains power anywhere in the world.
