

Cokin 52mm Nuances Vari ND2-400

ProdCode: COKIN12080

Variable Neutral Density Filter - Rotate for ND2 to ND400 range (1 to 8 stops)

[\[Download Images\]](#) (.zip file)

Features

- Stunning colour neutrality, totally free of infrared pollution
- Reduces light by between 1 and 8 stops
- Tempered, high-resolution Schott B270 glass
- Nano-metallic surface coating for perfectly uniform density
- Stackable without colour cast
- Available in 52mm to 82mm diameters

NUANCES Variable ND2-400 filters are designed to reduce the amount of light reaching your camera by between 1 and 8 stops, allowing the use of longer shutter speeds or reducing depth-of-field.

They are made from high-resolution mineral glass and use innovative technology: A new coating process ensures a totally uniform density, with a nano-metallic alloy applied on both sides of highly resistant, tempered Schott Glass B270 (renowned for its high transmittance and low reflection). The result is a stunning neutrality, completely free of infrared pollution.

Nuances Variable ND2-400 filters will catch 1 to 8 f.stops of light, making them ideal for long-exposure landscape photography and/or depth of field reduction in unpredictable conditions, especially with video shooting.
