ProdCode: IKALEC890

Honeycomb 90 Degree for Lyra Low-Profile Lights LBX8, LBX8-POE, & LWX8

[\[Download Images\]](#) (.zip file)

Features

- Honeycomb 90 Degree for Lyra Low-Profile Lights LBX8, LBX8-POE, & LWX8
- 90 degree Honey Comb Pattern
- Controls Light Spill
- Compatible with the LBX8, LWX8, LBX8-POE Studio Soft Lights
- Lightweight and Easy to Attach

The 90-Degree Honeycomb Grid is a precision light modifier designed to refine the 110-degree native beam of the LBX8, LWX8, & LBX8-POE fixture into a focused 90-degree spread, reducing peripheral spill while maintaining even illumination for studio photography and videography applications. The honeycomb grid features a hexagonal cell structure that directs light forward, allowing creatives to shape soft, directional lighting with crisp falloff – ideal for product shots, portrait work, and controlled environment setups.

The safety wire loop on the light modifier enables secure attachment of the included stainless steel safety cable to the fixture, providing a secondary safeguard.

In the box:

- 1x Honeycomb
- 1x Safety Wire
- 1x Safety Loop
