

Kenko TELEPLUS DG Extension Tube Set Micro 4/3

ProdCode: KENKO2045

10mm and 16mm tubes, Integrated Circuitry for AF & metering - Micro 4/3 mount

[\[Download Images\]](#) (.zip file)

Features

- Includes 10mm and 16mm Extension Tubes
- Available for Micro 4/3
- Full and perfect diaphragm (aperture) coupling
- Full and perfect TTL/EE Metering
- Use Individually or Combined

Extension tubes are designed to enable a lens to focus closer than its normal set minimum focusing distance. Getting closer has the effect of magnifying your subject (making it appear larger in the viewfinder and in your pictures). They are exceptionally useful for macro photography, enabling you to convert almost any lens into a macro lens at a fraction of the cost while maintaining its original optical quality. These DG extension tubes have no optics. They are mounted in between the camera body and lens to create more distance between the lens and CCD plane. By moving the lens further away from the CCD sensor in the camera, the lens is forced to focus much closer than normal. The greater the length of the extension tube, the closer the lens can focus.
