- Connectors: 2 x Rosettes with M6 Thread (31.8mm)

The all-new KONDOR BLUE Reversible Rosette Extension Arms are made for users of any level from run-n-gun solo creators to Hollywood DP's and camera operators. The arms are durable, comfortable, and stable at full extension making them ready for even the largest rig build outs.

After testing and observing a range of users and styles, we've opted to integrate an additional handhold on the extension arms themselves. The custom G10 grip has been contoured and textured to be comfortable with or without gloves. The oversized ratcheting knobs are also easy to adjust in any condition and have intelligent features such as a captive lock to keep the knobs from falling out during adjustment. And to top it off, the ¼" 20 mounts are perfect for the KONDOR BLUE Mondo Tie cable management system.

The arms are fully reversible—no need for left/right options—and have 72mm or 2.8" of extension. The laser engraved markings make it easy to match the length of both arms or to remember your preferred position once packed down for transit. Once the arms are extended, they reveal a dual NATO rail which can be useful to mount accessories to the inside or outside of your rig. A go-to option is to mount your monitor off of a Magic Arm placing the monitor directly in view.

You'll be impressed with the amount of details and features that are packed into the Reversible Rosette Extension Arms. Also be sure to check out the new Pro Grips which make for the perfect pairing.
