

Kondor Blue Fletch Fiber TX Module

ProdCode: KONFTXMBK

Fletch Fiber TX Module - Raven Black

[\[Download Images\]](#) (.zip file)

Features

- Converts HDMI 2.0/2.1 to MPO Fiber
- Supports up to 8K60 or 4K120, 4:4:4 colour
- HDR10 & Dolby Vision support
- Lossless, zero-latency transmission (2ns)
- Ultra-compact TX/RX units
- Rugged build for field or broadcast use
- USB-C or magnetic POGO pin power
- Optional 19" 1U rack mount for 9 receivers

Go Fiber, Without the Baggage

Unleash the power of native fiber connectivity—no bulky fiber backs, no heavy broadcast boxes. Just sleek, seamless, high-performance video transmission for any HDMI camera.

This powerful system converts HDMI 2.1 signals to OM3 MPO fiber, supporting up to 8K60 or 4K120 with zero-latency transmission over distances up to 1,000 feet. Whether you're running lines to a video village or sending feeds across a stage, it's like your camera suddenly has a built-in fiber port.

Transmitter

Mount the TX unit directly to your camera using:

Gold Mountor V-Mount Battery Plate Pro (with magnetic POGO power for a truly wireless feel) Or secure it via 1/4"-20 or 3/8"-16 screws with locating pins powering with a USB-C power source

No cables flopping, no awkward bricks—just elegant integration.

Receiver

Use it out-of-the-box as a rubber-footed desktop unit, or hard-mount to monitors, tripods, or DIT carts via ARRI-standard 3/8"-16 mounts.

Scaling up? Slot up to 9 RX units into a single 1U rack—perfect for multi-cam OB truck setups or control rooms.

Ideal For:

- Live production / Video Village routing
- OB truck multicam workflows
- Indie & commercial filmmakers
- On-set playback and DIT
- Studio builds seeking lightweight fiber I/O
