Every component of the V Mount Battery Plate is machined from aerospace grade aluminium and stainless steel to ensure durability and accuracy—you can confidently set the Pro Kit down without fear of the V Mount popping off.

With multiple mounting options, it's easy to find a range of uses for the KONDOR BLUE Mini V Mount plate. The Rod Block mounts via two captive M4 bolts and is also aided by Arri style anti twist pins making for a rock solid connection to the battery plate. It can also be mounted inverted providing for a wider range of mounting possibilities. The plate pivots on a 19mm rod and can be tensioned to user preference or locked off all together.

Be sure to explore our range of accessories and kits to make the most of this versatile mount. Some of these accessories include the 15mm Rod Clamp to Accessory Mount and the Director's Monitor Core Bracket with more to come.
