

Kondor Blue PRO-BLADE

ProdCode: KONPBSSDBK

SSD Handle for SANDISK USB-C Recording - Raven Black

[\[Download Images\]](#) (.zip file)

Features

- SSD Handle for SANDISK USB-C Recording
- Compatible with SanDisk Professional PRO-BLADE SSD Mag (compatible up to 2TB)
- Functional as either a top or side handle
- Built-in USB C protection
- Integrated safety stops on bottom NATO rail
- Multiple mounting points including cold shoe with safety stop, ¼ 20 ARRI style mounts, and NATO rails
- Textured design for ergonomics and comfort for a variety of applications
- Read/Write functionality

More and more cameras are enabled to record via USB C to an SSD. Working closely with SanDisk Professional and Panasonic, Kondor Blue have ensured an incredible experience when using the SanDisk Professional PRO-BLADE SSD Mag (up to 2TB). These drives can sustain breathtaking read/write speeds and up to 1,000 MB/s when using the drive in conjunction with the KONDOR BLUE SSD Handle.

Every feature of the handle has been meticulously considered and optimized. Not only does the handle perform as an incredible top handle, it can also be used as a side handle. The NATO rail that runs along the base serves as a great platform for dialing in balance and positioning for either orientation. The NATO features an integrated safety stop giving you confidence that the handle won't slip free.

The drive slides smoothly into the handle and has a recessed cutout on top for users to be able to grab the pull tab of the drive to remove. The USB C interface on the front of the grip is nested into a vertical NATO rail which provides great protection without any extra fuss. The vertical NATO also pairs perfectly with the KONDOR BLUE NATO to NATO Swivel Tilt Monitor Mount.

The KONDOR BLUE SSD Handle also features a cold shoe with a spring-loaded safety stop and 2x ¼ 20 ARRI style mounts. The mounting NATO clamp can also be oriented in parallel or perpendicular modes and is held in place with two captive M4 bolts and anti-twist pins. The NATO clamp stem can also be removed altogether to work with KONDOR BLUE's NATO Clamp to ARRI Rosette and Quick Release Rosette Module.

Best of all, the KONDOR BLUE SSD Handle is also comfortable! The combination of the side cross hatchings, diamond plate style G10, and finger cutouts make this grip an ergonomic dream. This handle is built like a tank but light like a plane to be a workhorse for years to come.
