Mounting monitors to an EVF arm can be challenging. The KONDOR BLUE Rosette Camera Monitor Bracket aims to make it as simple as possible while packing features into a lightweight package. The Rosette Bracket uses the new Anti-Twist Locator Pin Inserts that we introduced on our Monitor Cage NATO Rails. The adapters on the Rosette Camera Monitor Bracket go to the next level with its ability to accommodate 5" to 7" monitors with its sliding feature.

When paired with our EVF Support Arm Kit, you'll be able to adjust your monitor's desired height and angle quickly. The Rosette Camera Monitor Bracket has been trimmed down with weight-saving cutouts while maintaining structural integrity.

You can also use this Camera Monitor Bracket with our Rosette Single Rod Clamp to mount a perfectly level monitor onto your camera horizontally or with our Rosette Hand Grips for a handheld monitor. With so many rosette accessories available the possibilities are endless.
