## **Backlit Keyboard - The ASTRA2 Series**

You'll never be left in the dark with the new ASTRA2 series, the next-generation backlit keyboard that's packed with extras! No more struggling to see your keyboard while editing in a dark room - the ASTRA2 keyboard offers five selectable light levels, making it the perfect choice for any lighting environment. The ASTRA2 series is optimal from day to night, bright room or dim, with just a tap of your finger.

With one wire for the USB hub and a separate one for the keyboard, the ASTRA2 series is ideal for editing systems that use USB KVM extenders, and installations that require data security.
