Features

- 4K Portable USB Document Camera
- UltraHD resolution output
- Portable, lightweight design with flexible gooseneck
- High-speed capture up-to 30fps
- Hands-free auto-focus and image optimization
- USB plug and play design
- Compatible with most whiteboards

Excellent Image Quality

With a 13-megapixel Sony sensor, DC136 is a professional-quality visualizer which produces bright images and vivid colors. It supports capture and live reproduction at resolutions up-to 4K. Able to visualize the finest detail and even fast action, DC136 is great for use in education and training.

User friendly Interface

Buttons on the base quickly control core functions including lamp on/off, image freeze and capture. Auto-tune and focus buttons automatically optimize the camera to produce sharp, color balanced and bright images that look great on 4K monitors, projectors, and large format displays.

Lumens Ladibug Software

DC136 supports Lumens Ladibug 4K application. The software gives users access to advanced features which include annotating images, masking and cropping images, and sharing saved files. Ladibug is easy to use and is compatible with Windows and Mac computers.

Audio and Video Recording

The built-in microphone can capture video with audio: it's easy to record motion, complete with on-screen annotation and voice-over. This means that the device is convenient for collaborative training and distance learning. USB Plug & Play Set up couldn't be easier. The USB cable is connected to a computer (PC or Mac) without the need for an external power adapter or VGA cable. Using the Ladibug software, the computer can save videos locally or share files across networks.

Ultimate Webcam

Featuring an UltraHD camera and professional microphone, Lumens DC136 works with Zoom, Teams, Skype and Webex platforms. Users can position the camera head over a document, angle it towards the presenter or focus on students to encourage group participation. As a UVC compliant device, there are no drivers to install or configuration required. It's fully plug and play.

Imaging Flexibility

The 4K camera is mounted on a flexible, multi-angle gooseneck design. The height is adjustable for close-up or wide-angle imaging. The lens can capture large documents and objects, in excess of A3 in size (16.8" x 12.6"), giving the DC136 the versatility for use in any location and for a wide range of applications.
