- Available in black with coiled cable
- 3.4-metre cable with built-in strain relief
- Includes gold-plated 1/8-inch stereo connector with 1/4-inch adapter
- Ideal for other audio applications too

Clear, Accurate and Comfortable for Studio-Quality Monitoring

When the studio is your thing, and you need to study every detail of a mix, Roland's RH-200 headphones belong in your control room. Comfortable and light enough for all-night sessions, the RH-200's closed-back design shuts out external noise and lets you dive into the mix or focus on your performance. With 40mm drivers, neodymium magnets and CCAW (copper-clad aluminium wire) voice coils, the RH-200 offers clear, accurate and natural response, letting you assess everything from stereo image to low end – and always make the correct decision. That level of clarity also makes the RH-200 the ideal choice for other musical scenarios, from practicing your instrument to streaming your latest playlists.

A CLEAR MIX MEANS BETTER DECISIONS

When it comes to studio monitoring and tracking, accuracy matters. That's where the RH-200 headphones excel. The high-quality construction includes 40mm drivers, neodymium magnets and CCAW voice coils – all contributing to a clear, balanced, neutral sound that helps you make smarter production decisions and release more attention-grabbing music. Whether you're a producer studying a mix, or a musician tracking your performance on the studio floor, the RH-200 headphones will give you a faithful representation of your music.

COMFORTABLE CLOSED-BACK DESIGN, IDEAL FOR LONG SESSIONS

When inspiration strikes in the studio, you'll want to keep chasing it – and with the RH-200's comfortable earpieces and lightweight construction, you'll stay energized and alert, even during long sessions. For monitoring and tracking, the closed-back design offers great noise isolation, so distractions in a busy studio never break your focus. Alternatively, if you need to hear the room, you can also rotate the RH-200 earpieces through 180° for single-ear monitoring, and move freely around the control room thanks to the 3.4-metre cable with built-in strain relief.
