Cine Kit for Sony E mount lenses

[\[Download Images\]](#) (.zip file)

Features

- Cine Kit for Sony E mount lenses
- Portable and compact equipment for Samyang E mount lenses
- Precise follow focus control and comfortable dampening feel
- Ergonomic design, with independent modules
- The installation angle can be adjusted to meet the needs of handheld and tripod shooting scenes
- Adjustable AB marks for easy switch between AB focal length and full focal length.
- Multiple interchangeable gears (standard 0.8 MOD), compatible with various lens sizes

Recently, the demand for high-quality video recording using mirrorless cameras has increased. Currently, various cine accessories are sold in the market, however, Samyang has planned and released a NEW Samyang Cine Kit optimized for Samyang lens separately for videographers who use our VDSLR MK2 Sony E mount lenses and any Samyang lens with a mount diameter of 62mm such as the AF 24-70mm F2.8 FE. The Cine Kit is designed for easy and quick focus control in video.

Compact and Lightweight

Enhanced Portability

When using the Samyang Cine Kit, a heavier and larger cage is not necessary, since the Cine Kit is designed for easy and quick focus control in video. In order to install the existing 'Follow Focus', a 'Rig' must be configured, and also the 'Camera Cage' is required for DSLR, mirrorless cameras. With such a configuration, the size and weight will naturally increase. However, since a cage is not required when using Samyang Cine Kit, it is convenient to exchange lenses and cameras, and it is light in weight.

Strong Compatibility

The Cine Kit is made for Samyang Lens with a mount neck diameter of $\varnothing 62\text{mm}$. It's recommendable to use with the Samyang VDSLR Sony mount lens and the Samyang AF 24-70mm F2.8 FE lens. The dial is compatible with interchangeable M0.8-43T/43T/38T gears and can be mounted on the left or right sides of the follow focus for finer control.

Easy and Precise Control

Adjustable A/B Hard Stops

This allows precise follow focus control and comfortable dampening feel. Adjustable A/B marks for easy switch between A/B focal length and full focal length let you preset two distances for fast and reliable focus pulling.

In the box:

- Rod Holder & Plate
- Tripod Mount for Lens (Diameter of $\varnothing 62\text{mm}$)
- Follow Focus
- Seamless Gear Ring (Diameter of $\varnothing 81\text{-}\varnothing 83\text{mm}$)
- Rod ($\varnothing 15 \times 10\text{mm}$)
