Steel Bracket to Mount and Secure a Mac Studio Computer Under a Desk or to a Wall

[Download Images] (.zip file)

Features

- Steel Bracket to Mount and Secure a Mac Studio Computer Under a Desk or to a Wall
- **Secures Your Mac Studio Under a Desk, Table, Shelf, or Even to a Wall**
Install using included drill hole template and included screws (and anchors for drywall mounting)
- **Heavy-gauge Steel Design with a Refined Finish**
Double powder-coated finish protects your computer
- **Provides Wraparound, Pry-resistant Security**
With the included steel locking bar installed and your padlock attached, your computer is secured on all sides
- **Kensington Lock Compatible**
Includes Kensington Security Slot on locking bar
- **Straightforward Installation**
Includes easy to follow documentation and a drill hole template, plus the hardware needed to attach the bracket to a desk, shelf, or a wall
- **Provides Cable Management**
Includes self-adhesive backed cable management clips to keep your cables tidy

*Mac Studio not included

Flexible and Secure Mounting

The Sonnet MacCuff Studio security mounting bracket frees up space by attaching your Mac Studio® under a desk or shelf, or to a wall while allowing unimpeded access to its ports, power switch, and SD card slot.

Wraparound Security

Unlike brackets and shelves that merely hold a Mac Studio in place — or others that provide minimal protection — MacCuff Studio is pry-resistant and provides theft deterrence all around. Extended panels on four sides, a pry-resistant security ridge, and steel locking bar envelope your Mac Studio without impeding its operation.

Safely Secure Your Mac Studio

The included steel locking bar can be secured to the bracket in several ways depending on your needs.

- **Simple Security - Standard Screw**

A Phillips head screw is provided to hold the locking bar to the bracket, keeping your Mac Studio protected from somebody simply walking up and taking it.

- **Better Security - Torx Screw**

A Torx screw and screwdriver bit to fasten it are also included to secure the locking bar in place of the Phillips screw. Because the Torx screw is less common, it is harder to remove without the correct tool, providing added protection for your Mac Studio.

- **Best Security - Your Padlock**

MacCuff Studio supports the use of a padlock (sold separately) to secure your Mac Studio — you hold the key (or combination)!

- **Your Kensington® Lock: Ready**

Secure your Mac Studio with a Kensington cable lock (sold separately) to further anchor MacCuff Studio and Mac Studio in place.

- **Combined Protection**

MacCuff Studio supports the use of a padlock plus a screw or Kensington cable lock at the same time for the ultimate in protection.

Straightforward Installation

Sonnet provides simple instructions and the necessary hardware to secure the

bracket. For under-desk or table-top mounting, simply tape the included drill hole guide to the surface you're attaching the bracket, drill pilot holes, and then secure MacCuff Studio using the four supplied wood screws. For wall mounting, tape the drill hole template to the wall, drill holes through the wall, install the included drywall anchors in the holes as necessary, and then secure the MacCuff Studio using the four supplied drywall screws.

Heavy Duty Construction

Like the Sonnet MacCuff mini 2 bracket for Mac mini® computers, the MacCuff Studio is constructed of heavy-gauge steel to firmly hold your Mac Studio in place, and yet delivers a light touch — its refined double powder-coated finish protects the computer. Sonnet designed MacCuff Studio to secure your computer without blocking its air vents and allows you to connect cables without having to worry whether they will fit. Sonnet also designed MacCuff Studio to support robust WiFi and Bluetooth operation, ideal for all your wireless connections.

Keep Your Cables Organized - Cable Management Clips

MacCuff Studio includes two adhesive-backed cable management clips that enable you to route and secure multiple cables the way that best suits your needs. The clips adhere to MacCuff Studio – or desk or wall, if you need – hold cables securely, and allow you to open and close them to move (or remove) cables as necessary. And, they can be removed without damage to the surface they're adhered to.

In the box:

- MacCuff Studio bracket
- Locking bar(1)
- One Phillips head screw
- One magnetic tip Phillips screwdriver bit
- One Torx screw
- Four wood screws
- Four drywall screws
- Four drywall anchors
