

YoloLiv Micro Four Thirds Lens

ProdCode: YOLOMFTLENS

18mm F1.4 M43-mount lens

[\[Download Images\]](#) (.zip file)

Features

- 18mm F1.4 M43-mount lens
- F1.4 Large Aperture
- M43 Mount Design
- Advanced Optical Design – 7 elements in 7 groups
- 46mm Filter Thread
- Dual Focus Modes

The YoloLiv Lens is an 18mm F1.4 M43-mount lens featuring a bright, large aperture for smooth background blur and professional image quality. It's designed to deliver a compact, immersive shooting experience with YoloCam S7.

The YoloLiv Lens features a lightweight design paired with a bright F1.4 large aperture, allowing you to easily create a soft, smooth, and immersive background blur effect. Designed for the M43 mount, it supports both auto focus and manual focus.

The lens adopts a 7-element in 7-groups optical structure with a nano multi-layer coating process to improve image quality and reduce flare and ghosting.

Equipped with 7 aperture blades, it offers an aperture range from F1.4 to F22. A stepper motor drive system ensures smooth and precise focusing performance.

Compatible

Currently compatible only with the YoloCam S7 camera.

Structure

This 18mm F1.4 lens is designed to deliver a balance between compact form and uncompromised image quality, enabling a more immersive and flexible shooting experience.

It features a metal lens mount, gold-plated contacts, and supports EXIF information transmission for seamless camera integration.

Focus Ring

The focus ring supports full-time manual focus. After completing auto focus, you can directly fine-tune the focus manually without switching focus modes, allowing you to precisely achieve your desired focal point.

Function

Equipped with 4 aspherical lens elements and 3 low dispersion elements, this lens effectively compensates for various optical aberrations, delivering clearer images with improved edge-to-edge sharpness and color accuracy.

In the box:

- 1x YoloLiv Lens
